Comments: The Midas Gold project is sure to have a huge impact on both the residents and environment of Warm Lake. It is imperative that Midas Gold does every thing within their power to mitigate the negative impact of their project on the area.

This open pit mining project is sure to have environmental impact, but will also effect our daily use of roads.

1. Midas Gold should require, not encourage, the use of their buses.
2. They also have to develop pull-outs on the Warm Lake Highway, so trucks can pull over and let passenger vehicles pass.

As of right now, Warm Lake is a peaceful idyll. But this project is sure to bring noise and disruption to the peace at Warm Lake.

1. Midas Gold needs to require the use of trucks without air brakes.
2. Limit the hours of traffic so that there are still peaceful times at the Lake.
3. Reduce the number of car/truck trips that pass Warm Lake and go up the Warm Lake summit.

There is a limit to the number of people that Warm Lake can house.

1. Midas Gold must build campgrounds on private property to accommodate workers and their families, since Warm Lake campgrounds and campable areas are already full especially on weekends.

Thank you for your consideration
