Title:
Comments: I would like to see the following criteria evaluated and a decision made scrupulously based on very high likely outcomes for:

1: protecting the fisheries and their habitat regarding ever watershed downriver of the uppermost (in terms of streams) portion of this project;

2: preventing contamination of soils and wildlife habitat from petroleum and chemical products;

3: preserving or increasing all public access to this project area and surrounding region regardless of the mode of access;

4: successful reclamation of the project site and any other lands harmed or altered in any way by said mining project;

5: maintaining historic and cultural artifacts and places, and preexisting landscapes in, around and near the entire project site;

6: moving increased (voltage and or wattage) power lines and poles off of and away from residential properties, including those with or without current structures, and;

7: any and all other things and/or actions to protect all species of fishes, wildlife, vegetation and avian life regarding all aspects of this project whether near or far from the actual mining site.
