Comments: This mining project will have negative effects on a very serene and valuable natural resource. The noise pollution, excessive traffic, and general increased use of the area, including Warm Lake itself will be affected in ways that could not be recovered for generations. This does not seem fair to those who have invested time and money in recreation permits etc. over the years. I fear the increased traffic alone, of a mine related vehicle every five minutes (using Midas own data) will be a genuine safety hazard for a long, long time.

I encourage to rethink this project and disallow the permit to mine the Stibnite area.
