Comments: I support this project. Adding properly constructed bike trail will reduce the load on overtaxed recreation areas around Tucson, and will draw more economic users to this area. The proposed trail design and location lessens the erosion, expansion, noise, and safety concerns posed by other trail types for motorized users. Because a majority of the proposed trails fall on pre-disturbed areas, the environmental costs of implementing these trails is minimal. These trails will be a great addition to the community and a much needed relief for recreational users.
