Comments: I fully support the development of the Tumacacori Red Springs Single-Track Trail System #51581 for motorized and non motorized use. This area will provide the first official motorized single track for the Coronado National Forrest. My research shows this area is ideal for this type of use due to existing disturbed ground and distance from developed areas. The soil type would support motorized use with minimal erosion issues. Furthermore there is a substantial user base that is willing to maintain and oversee responsible use of these trails. Multi user conflicts would be minimal due to low use by these groups. Noise should not be much of a factor due to the remote location. The need for these trails reflects the large number of dirtbike and mountain bike enthusiast in Southern Arizona. These users would also help support the local economy. Please move forward in the development of this much needed trail system.
