Comments: I believe that the proposed 28-mile single-track trail system in the Tumacacori Mountains is ideal as it is seldom used and does not present any immediate user conflicts. The trail will use a high percentage of already disturbed ground. This project represents the first official single track motorized trail on the entire Coronado National Forest. This trail would connect those of us in the Sahuarita/Hereford areas the Tumacacori Mountains via dirt roads and trails. I believe the local user community will be very active in maintaining this trail system.
