Comments: Hello,

I would like to comment favorably on this project. It is badly needed...

Approximately 30 miles of trail will be established expressly designated for single-track users (OHV dirt bike, equestrian, hiker). The trail system will be engineered in such a fashion as to minimize environmental impact and built to USFS trail engineering standards. A staging area will be established to support a well-marked route, which will ensure user safety.

The trails have been mapped and tagged, reviewed by state environmentalists and archaeologists. There were no issues found that would cause the state to decline the locations of the trails.

This location is ideal as it is seldom used and does not present any immediate user conflicts; we will be using a high percentage of already disturbed ground, and the soil and terrain are such that on going maintenance will be minimal over time. This project represents the first official single track motorized trail on the entire Coronado National Forest.

The community NEEDS this trail, and more like it!
