Title:

Comments: Thank you for allowing this project to continue to the point where we are now. My thoughts on this are that the completion of this project will be a net benefit to the beautiful wilderness of Southern AZ and the Off-road Motorcycle community. I say this because:

The people that love to ride off-road will use this resource instead of cutting 'social' and often damaging trails through our natural resources, primarily because it the sensible thing to do for the vast majority that would use it. It will provide a "Family Friendly" resource that can allow a greater segment of our population use for family and group outings.

It will be a safer place to ride than in the open desert because of the multi-user and concentration of use there will make it likely that someone else will be in the vicinity in case of accident or injury.

Ultimately, since this is a joint effort between the government and the public, it will lead to more good will between all and a greater respect for the outdoors by those just entering the sport when they see what an example of 'good stewardship' of the land looks like.
