Comments: As a taxpayer and person who believes in preserving natural places for future generations, I urge you to veto this land lease. Nevada has abundant solar and geothermal resources. There is no need to tap public lands for oil and gas exploration. Renewable sources of energy create more jobs and do far less harm. Our public lands should not be sacrificed so that corporations can make a quick buck. The lands will never recover from the mess they will make and then somehow figure how to weasel out of cleaning up. We simply cannot afford this wonton destruction when we have better, cleaner and far less expensive options.
