First name: Melissa

Last name: Horton

Organization:

Title:

Comments: Why? Oil and coal are so 1970. Let's not destroy our forests for drilling and all the tragic environmental impacts this will have for generations to come. Our forests are a treasure and should be allowed to remain intact so the ecosystems can continue to thrive and sustain us by cleaning our air and allowing us to get back to nature.

Also, what happens during a fire? Fire is necessary for forest soil regeneration. Oil and fire don't mix well.
