Comments: I oppose the lease of these public lands for the possibility of oil and gas drilling. First, the public land should remain open and accessible to the public without the encroachment and disturbance of a company. Second, the environmental impact on such a beautiful and rich part of Nevada's landscape should outweigh any economic benefit. Third, current energy trends have the possibility of shifts that will then leave this land scarred and no longer used by the oil and gas company. These possible leases hurt Nevada and its residents.
