Comments: I strongly oppose oil and gas leasing within the Ruby Mountains, especially as proposed near Harrison Pass. The areas under scrutiny are large and roadless, and I believe that moving forward with oil and gas development has the propensity to negatively impact these beautiful lands. I do not think that the forest service should continue this line of thought/action. The Ruby Mountains are one of, if not the best range in the state, with towering scenery and spectacular wilderness qualities. Keep these public lands pristine and available for public use, do not consider marring them with the impacts of oil and gas extraction. Please scrap this project.

Thank You
