Comments: Don't Allow Fracking in the Ruby Mountains

Dear Ms. Elliott,

The Ruby Mountains are one of the most spectacular landscapes in Nevada. With abundant big game, robust trout fisheries and dense sage grouse habitat, the Rubies are a critical resource for wildlife.

Fracking and drilling for oil and gas would irreparably harm this undisturbed area. The waters that our trout rely on could be poisoned in spills or well failures after fracking. Mule deer habitat would be fragmented, and the deers' ability to safely overwinter would be compromised. Vulnerable sage grouse, known to be negatively affected by oil and gas development, will inch steadily closer to extinction.

Oil and gas prices are at an all time low because of oversupply. Car makers are rolling out electric models and the renewable energy is being embraced by some of the biggest companies in the U.S.. Renewable energy industries are providing well-paying jobs that cannot be outsourced. Why this push for more drilling?

I urge you not to permit any leasing for oil and gas in the Ruby Mountains. Non-surface occupancy stipulations do nothing to protect our precious aquatic resources from the harms of fracking. The only way to protect the fragile resources of the Rubies is to forbid leasing on all of these parcels.

Thank you,

Sandra Woodall
