Comments: revised forest plan

I would like to add the following comments to your revised forest plan-that the best available science is used to manage our wildlife on national forests including wild buffalo-manage national forest lands for genetic diversity and viable populations of wild buffalo-use wild buffalo for grassland recovery-use keystone wildlife species like wild buffalo in updated habitat plan on national forests to secure their place on our national forests.the public overwhelmingly wants the last remaining wild buffalo to not only thrive but to be managed as wildlife and not cattle.they are not cattle.period. thankyou randy sailer 1018 cherry lane beulah,nd 58523
