Comments: The data presented to support development of more motorized trails is in direct conflict with the surveys conducted on the ground in the recent past. Mountain bikers and hikers flood the area and celebrate the wealth of non-motorized trails throughout the East River Valley. Seems the pro-motor data is more anecdotal or worse, the product of ballot stuffing via bots. Anyone using our trails OR watching the inflow into the backcountry of users, cannot deny the overwhelming numbers of quiet users. It is the goal of those caring for a peaceful, environmental favoring, and user-sensitive outing to maintain and increase the number of opportunities for same in our backyard.
