Comments: It occurs to me that the main problem we are seeking to address in this proposal is to increase quality and accessibility of non-motorized trails on the uncomphagre plateau. I believe that there exists a solution that achieves the goals of the proposal without closing trails to motorized users. I would like to see some new trails created. Some good loops, only for mountain bikers and hikers. There could be some benches along the way for families and walkers. Simply closing trails to motorized users will not meet all the goals. We need more accessibility. We need to create new challenging trails for the non-motorized users. Dirt bikers are not evil. And they want to be good stewards of our environment.
