Comments: On page 43 of the plan under the title of Carbon storage.

Prescribed burning does not increase forest carbon. What the plan fails to mention is that timber harvesting is the most effective method of carbon storage. It is time the forest Service harvest more trees.

On page 7 of the document, there is a statement of the Social and Economic Characteristics of the FS. The forest no longer follows the multiple use mission of the forest service. Contrary to forest guideline local rangers continue to block access to the forest by bureaucratic actions and then proclaim loudly that private landowners are blocking access to the public when they in fact are the major blockers. It is time for local rangers to be less partisan.
