Comments: I am writing to express my strong support for this pipeline to bring water to Pajarito Mountain ski area for snow making purposes & domestic purposes. This pipeline will guarantee at least some skiing on Pajarito Mountain even in the driest of winters. Sipapu Ski Area near Penasco, NM (similar climate to Los Alamos) has a proven track record of providing skiing in dry winters like this one. The additional water on the mountain could also be beneficial for fighting wild fires as was demonstrated during the 2011 Las Conchas Fire and during a 2007 wildfire that burned near the Sun Valley Ski Area in Idaho. I request that the Forest Service do everything in it's power to expedite the approval and construction of this beneficial project.
