Comments: Camp May Water Pipeline Project comment

All,

Thank you for the opportunity to comment on the Camp May Water Pipeline Project.

My one concern has to do with the "shape" of the Camp May road. Are you satisfied that sufficient analysis has been done to properly scope the project. The Camp May Road is fairly beat-up. Heavy thunderstorms wash out the drainage on the road fairly often. My understanding (I could be wrong) is that the road was never properly built, but rather the soil was bulldozed and the asphalt was laid on top - w/o real drainage. So, new construction activities would have to be cognizant of these issues.

Thank you for your time.
