Comments: Ruby Oil and Gas

Writing on behalf of my family, including 5 voting adults: We are categorically opposed to these lands, or others previously designated National Forest, being proposed/ultimately being granted to private entities for the purpose of oil and gas leasing (and eventual extractive activity). National Forests are owned by the commons for peaceful recreation, their value as habitat for a variety of ecosystems, and their immense value for carbon sequestration at a time when this should be an international priority. The activities required to extract oil and/or gas are at extreme odds to any of these purposes. Shame on those who would subvert the very purpose of national forest land for short term gain.
