Comments: Why does the public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil & public need to have someone drill for oil &

This National Forest Area is a part of the public lands of the USA. The question is, Why does the public need to have someone drill for oil & Damp; gas in this National Forest Area? How much oil and natural gas does the Forest Service expect is in the National Forest Area? Previous estimates of oil and gas reserves in the continental US were only 2 or so years. Why ruin these public lands for only 2 or so years worth of dirty energy, when we could have clean, renewable energy instead? Please respond.

Thank you, Reed Oliver, Cincinnati, Ohio
