Comments: I have been to the pool once this past summer.

I am wondering where the overflow parking lot would be? I am of the opinion that added parking will be a detriment to the area. How many spaces would be added and what would be the overall impact? Will there or has there been an EIS or an EA study done and what was the analysis from this?

If you want to minimize the impact, take the signs down from 126 which were added in the last year. When I was there, we parked along the access road. There were plenty of signs directing where to park. The Forest Service can issue tickets so let them do their job.
