Comments: To whom it may concern,

This proposal drilling for oil in the Ruby Mountains is idiotic on so many levels. First, there is no history of drilling in this part of Nevada. Whatever oil company that wants to drill Wildcat oil wells out there is obviously misguided. I am a geologist and whatever oil these companies think they have is either highly unconventional or totally imaginary.

Even if there was oil there, the fact that the land would be taken from the public is despicable. Hunters, anglers, hikers and scientists all enjoy the myriad of uses that the Ruby Mountains provide to us. This is the best scenery Nevada has to offer, don't give it over to an idiotic oil company.
