Comments: Please please please factor in critical contiguous big game migration corridors and contiguous habitat for elk, deer, moose, bear, sheep, goats and antelope into this plan. I know it is a challenge to do that but the science is clear that disrupting these lands will have profound long-term negative impacts on these species on our public lands. As a big game hunter in the back-country, it's extremely frustrating to see more and more fragmentation of public lands and the negative impact on these species. Thx!
