Comments: This plan has several attributes worth noting.

I support the project. Many local residents ride off road motorcycles. this project will benefit many residents. It is located in a semi-remote area and therefore will have minimal disturbance and conflict with other user groups.

The project supports sustainable motorized recreation over time. The trail system links with existing "motor vehicle use map" roads affording long distance loop rides. The proposed are is designated for this form of recreational use. I have many friends statewide and this will draw visitors to the area thereby positively improving the local economy.
