Comments: Tell the Forest Service to Protect Wildlife

May 31, 2018

GMUG Plan Revision Team

Dear Revision Team,

I am an advocate for conserving America's public lands. I urge the Forest Service to include strong protections for wildlife, wildlands, and water in the revised management plan for the Grand Mesa, Uncompahgre, and Gunnison national forests.

Many at-risk species depend on these forests. They provide key habitat for the Canada lynx and Gunnison sage-grouse, which are both threatened species under the Endangered Species Act. Canada lynx need large areas of connected habitat and safeguards from threats such as logging. Oil and gas development should be avoided in Gunnison sage-grouse habitat. Other vulnerable species that need strict management standards and guidelines include the river otter, Gunnison's prairie dog, American white pelican, bald eagle, boreal owl, northern goshawk, Colorado River cutthroat trout, other animals, and many plants.

One of the best ways to protect wildlife and plants in our national forests is to designate special areas dedicated to conservation. This is why I support the Citizens' Wilderness Proposal. The Proposal would provide important management direction for essential places on the forest for at-risk species.

I encourage the GMUG Plan Revision Team to develop and adopt a management plan alternative that maximizes conservation for the wildlife that depend on these forests and their habitat.

As a resident of Colorado and a person who loves western landscapes and wildlife, I advocate conservation and positive approaches to sustaining habitats for all wildlife. My husband was actively involved as a volunteer at the time Canada lynx were introduced into the San Juan forests. I think it is a high priority to manage wild lands for long-term sustainability for all life.

Sincerely,

Ms. Connie Chrane
