Title:

Comments: I fully support this project as I have seen the decrease in early-succession forest in the project region over the last 20 years. This area has a long and storied sporting history, namely for grouse and deer hunters, but the current trend in land management does not promote desirable habitat, and that impacts the greater sporting heritage of the region. With lesser interest, energy, and dollars generated by sportsmen in the area, the entire system begins to slip. Please move forward with this harvest program in the interest of game species and associated wildlife.
