Title:

Comments: Thank you for the opportunity to add comment to the proposed "Early Successional Habitat Project #53629. As a forestry & wildlife consultant I am extremely aware of the needs of diversifying our forest stage structure. This project will be a great start to bringing a balance to our forested habitats. As you are aware there are many species of wildlife that are in decline due to loss of habitat. While we, the conservation minded public, have done a good job in conserving land for wildlife. We have been neglecting to assure a diversity of habitats for the conservation of all species. In addition to conserving wildlife, projects like this one, add to helping conserve rural people, their economies as well as recreational opportunities. I applaud the Forest Service, and personnel for their efforts with this project. Please keep me advised to any future projects, and as to how I can help.

Sincerely,

Tom Brulé
