Comments: Comments on proposed activities:

1. There is no science to back up the idea that "thinning' will improve late seral habitat. The EIS must fully explore the science on this topic and follow the science. Only thin younger stands anywhere in this landscape especially the LSR because there is a deficit of later seral habitat in this area. Do not mess with older habitat because there is no science to back up claims that you can "enhance" that existing older forest.

2. Do not downgrade roads to maintenance level one because these roads will fail sooner or later and because you can't keep the gates locked. Decommission those roads instead. Decommission more roads because you do not have the $ to maintain them to standard and there is no such thing as "stormproofing" a road.

3. Block with tank traps all "unauthorized" roads and decommission those sections that pose threats to water quality and riparian areas.
