Title:

Comments: (1) Please confirm our cistern was GPS Mapped and the proper Buffer Zone created for the planned thinning which was planned directly over the cistern. Jay and Jeremy had walked it and committed to getting GPS points to create the Buffer Zone and have it flagged. We never received confirmation that was completed.

(2) The greatest concern is the successful and effective implementation of the Mitigation Measures. There are so many unique/special/rare attributes and conditions in the Bingo Basin. One mistake is all it takes for serious ecological degradation. Please ensure the budget, staffing, training, and schedule will enable robust effective implementation of the Mitigation Measures which are exceptionally detailed and comprehensive. Effective Audit, Oversight, and Surveillance is an absolute.
