Comments: I am writing in support of the proposed Recreational actions outlined in the Robinson Integrated Resource Project Environmental Impact Assessment now under review by the Forest Service.

I support the creation of additional ski zones in the Chittenden Brook Basin. I believe they will create exciting new opportunities to expand on the popularity of the Brandon Gap Zones. This new zone can help disperse the use over a larger area.

I strongly support the siting of the hut at the campground, and the location ties in naturally with the new ski zones and the existing popularity of the backcountry use at Brandon Gap. I believe the hut can develop to be a popular year round recreational destination for skiers, mountain bikers, snowshoers, or hikers.

I support the incorporation of the proposed design and layout of the Velomont Trail through this portion of the National Forest. The trail has potential to develop into a long distance mountain bike network not currently available in Vermont. In conjunction with the potential for future hut development, this could lead to unique and special recreational opportunities for Forest visitors.
