Title:

Comments: I strongly support implementing this project because it clearly meets the recommended actions in the Klamath Project Biological Opinion for coho salmon, Appendix C Restoration Project Type 5, Creation of Off-Channel Ponds/Side Channel Habitat, as it will re-connect side-channels and improve off-channel alcoves and ponds (NMFS and USFWS 2013); creating much needed habitat complexity and refugia for coho and spring Chinook populations at high risk of extinction on the Salmon River.
