Comments: I find all of these potential sites not available for oil and gas leasing and believe that the corrupt Washington federal govt and venal vicious blm agency is covering too much American land with oil and gas with its attendant water turned into poison and burning. the blm has been on this kick to destroy America since the secret dick cheney energy meetings and we need to get away from the effects of his dicks venality and profiteering for his oil pals. this analysis needs to be shut down. qamerican people do not support turning every inch of oru land into profiteering for the oil companies. their work never helps America. it results in their exectives getting \$200 million retirement packages and the bp oil disaster in the fulf of mexico where the ocean wont be clean again for one hundred years. how about the spill in Arkansas where a town was covered in oil . we need to be much more careful with our land we were lucky. this agency seems to want to destroy America with oil poison. I do not support using American tax dollars for this upurpose or chewing up this land and killing all the wildlife, trees, birds that need this land to live on. its time to make sure there is land our kids can live on. blm could care less with their plans about that factor. you need clean water to live and a clean environment. oil and gas development gives us none of those things. I want to be kep advised of all further developments on this poison analysis.
