First name: Daniel

Last name: Graham

Organization:

Title: Mr.

Comments: To whom it may concern,

As a resident of the Monument, CO area I am most concerned with the destruction of natural habitat, use of our precious limited drinking water, and degraded quality of life in the Tri Lakes area. I have seen the slow but steady decline concerning the quality of life in North Dakota, created by the neverending truck traffic that leads to choking dust and terrible traffic. Worry by the residents about possible water contamination. And what are we going to leave our kids with? Property values around an area with active oil well / fracking operations go down. As far as the future goes, we may be looking at a ticking time bomb with regards to the fracking chemicals. And trying to "seal" anything with concrete is futile considering that there are two types of concrete; concrete that's cracked and concrete that's going to crack.

All in all I strongly oppose any fracking activity near or worse yet; through any aquifer or populated area.

Thank you so much for this opportunity to voice myself,

Daniel
