Comments: As a life long Nevadan, Las Vegan, hunter, fisherman and conservationist I urge you to move forward with the development of the Lee Canyon Ski resort located at the end of State route 156. I have spent many years in the Spring Mountains. The Spring mountains are home to many species of plants and wild life. This is a fact. However I have spent enough time and seen enough of this area that I have to believe the proposed expansions will not have a direct negative effect on the wildlife or plant life. In fact quite the opposite, in some instances which winter time "out buildings" can actually offer some summer and springtime sanctuary for certain species. Including our beloved blue butterfly. This expansion will also create a litany of jobs both temporary and permanent. Primarily funded from out of state company's. That's more money in the pockets of Nevadans. And that I also encourage. Thank you.
