First name: Ann

Last name: Hart

Organization:

Title:

Comments: Please make part of your plan for the forests free of mechanized noise and other human pollutants so the future generations may have something for humans in need of pure and quiet beauty, other than National Parks too full of people now, for the futures wilderness can still offer respite in an ever crowded and noisy world. You know its important, please know I think so too and trust you to take care of what is all of ours. The tree mortality disaster is a sad outcome of ill conceived forestry. Please keep the future of forests in your area of responsibility the special and clean space that it is.

Free of tagging, tree mutilations and the noise pollution - that our world will always need in our unpredictable future.

Thank you

Ann Hart
