Comments: As a state resident, not an outsider, I would say most motorized winter use riders take great care in ensuring we do not damage or abuse our privilege. The snow machines today give riders much farther range and ability to reach farther out locations to use. This allows those non motorized users free/easy to access land to recreate, and the motorized guys can use a corridor to not double up on land usage. We have always been pushed up against the wall when it comes to this so we respect our play ground. Pass option B!
