Last name: Naylor

Organization: self

Title:

Comments: Aloha,

Among the many reasons to protect wilderness, climate changes effect upon all species including invasive ones which will spread w/ roads , logging and other resource extraction.

Strong regulations must be in place and enforced!

Native peoples & wildlife especially current and likely future endangered species, must be considered.

Ancient old growth forests must be protected.

A huge portion of this land area must be given Wilderness designation.

Salmon runs must be protected from dams and pollution.

We have far too many Superfund sites on public lands! Corporate extraction of resources often results in rape & pillage & leave it for the taxpayer to clean up.

No way! Save it! Protect it
