Title:

Comments: My parents lived in Alaska before I was born. I am now 64 years old, and their amazing stories and descriptions of the Alaskan wilderness have fed my soul throughout these many years, even though I have never visited Alaska and probably will never be able to afford to do so. It is my most sincere hope that future generations will also be allowed to let their imaginations wander through the Alaskan wilderness and perhaps experience it firsthand.

Any plan must protect the "wilderness character" of the WSA. The Forest Service's weak proposal will only protect its "existing character." Additionally, the plan should protect the wilderness character of the lands in the WSA by classifying all of them with the Forest Service's "Primitive" standard, which is the most protective standard in the agency's recreational classification system.

Restore strong protection to the lands within the WSA that the federal government purchased following the 1989 Exxon Valdez oil spill. These lands were acquired for the restoration of wilderness values and must be managed "in perpetuity for conservation and wilderness purposes," as promised when they were purchased.

The Chugach NF must address ongoing illegal recreational use of chainsaws in the WSA, which has resulted in damaging tree removal along dozens of wilderness beaches, including in sensitive areas.

Alternative D recommends the maximum amount of land for Wilderness of any of the Alternatives (97 percent of the WSA, or 1.884 million acres). I support a modified Alternative D wilderness recommendation that also includes Lake Nellie Juan and the lands within the WSA boundary that were purchased for restoration of wilderness resources following the oil spill.
