First name: Robert

Last name: Summers

Organization: retired

Title:

Comments: The current proposed plan must ensure that the purchased lands following the 1989 oil spill is restored and remains as wilderness in perpetuity as promised upon their purchase.

We are getting down to the last large areas of wilderness, hence the maximum amount of existing land and water within these regions / areas have to be held for scientific study as well as enhancing the ecology of the region and viability of fish runs and clean water.

Thank you,
