Title:

Comments: I am submitting a comment on the Forest Service Draft Land and Resource Management Plan for the Chugach National Forest (NF) in Alaska.

I am asking for the following changes:

- \* Protecting the wilderness character of the WSA by classifying with the Forest Service primitive standard.
- \* Restoring the protection to the lands within the WSA. The federal government purchased the land after the 1989 Exxon Valdez oil spill. The lands should be managed as promised when they were purchased.
- \* Chainsaws have damaged tree removal in the Chugach NF which should be addressed since it is an ongoing illegal recreational use of them.
- \* Please use Alternative D which allows the maximum amount of land (97 percent of the WSA, or 1.884 million acres). Please support Alternative D wilderness recommendations.

Please help to protect Alaska's wilderness.
