Comments: My family has been involved in sustainable, safe, and leave-no-trace motorized recreation in Alaskan lands for 3 generations. My family first mixed here in the 60s and it's sad for me to see the systematic discrimination of motorized transportation and recreation when two legged access remains completely uninhibited.

Motorized accesss opens up public lands to individuals with mobility challenges as well as The elderly among us.

Proper management and self monitoring removes any risk of damage to native habitat.

Don't be short sighted - we need to remove the oppressive and discriminatory land closures of the past 20 years and open up MORE public lands to responsible motorized use.
