Title:

Comments: The new plan should improve the Wilderness character of the WSA and not the Forest Services' weak proposal protecting on the existing character. and Primitive standard, the most protective should be used to classify all of the lands.

Restore strong protections to those areas devastated by the Exxon Valdez oil spill and in perpetuity for conservation and wilderness purposes as promised at the time of purchase.

The illegal use of chainsaws in the WSA should be stopped & those damaging the trees should be charged. alternative D recommends the maximum amount of land but a modified Alternative D could also include Lake Nellie Juan the lands within the WSA boundary purchased for restoration after the oil spill.

Just too much destruction and lack of care. Important we preserve more of our land to protect other animal specials, plants and water.
