Title:

Comments: It has been brought to my attention that many of the comments submitted through this system in support of more motorized use opportunities in the CNF have been CHANGED to present a different view. The names signed at the bottom of the comment are different than those who originally submitted the comment. It is unclear if this is a database error or if the system was intentionally hacked to push a certain agenda. Either way, the system is flawed and must be looked at carefully. If indeed this is the result of a hack, this needs to be fully investigated and the comment period should be carried out again with a more secure system.

Thank you,

Cody
