Comments: This is valuable wild land.

I urge you to restore the most strong protections for the parts of the WSA our government bought after the Exxon 'Valdez' oil spill in order to preserve forever the wilderness values and also for conservation as was promised!

In addition, this plan needs to protect the specific "wilderness character" of the WSA. By this it means the classification by the Forest Service should be "primitive".

I understand that an Alternative D would preserve the most amount of land for Wilderness which is important and that should include Lake Nellie Juan as well as the aforementioned oil spill restoration area.

Last, but not least the Chugach NF needs to actively protect these lands against any illegal destruction of trees either by the cutting of same and their removal as that in itself is most damaging.
