Comments: The Plan appears to be very professional and provides the ability to navigate through the studies and action plans. The volume of the information and the variety of categories makes a simple response very difficult. I primarily am supportive of the action items except any changes to winterized motorized access beyond the current 2002 plan and winter access ROD of 2007. I am against any changes in the plan in places where the description makes a change from generally motorized to generally non-motorized. I do not agree that the data collected is truly significant or fully considers current or future recreational or travel needs. The entire area was historically open to motorized travel and restrictions are continually tightening and restricting access. Therefore I must support Alternative A.
