Comments: From what I hear the Forest Service has proposed a forest plan with the weakest protections for the study area possible. I submit that there is no acceptable reason for this and that the wilderness character of the WSA must be protected with a "Primitive" classification. The area is reputed to be spectacular and was purchased with a promise of management consistent with wilderness in perpetuity.

Why is the Forest Service allowing chainsaws in the WSA. That must be stopped.

Alternative D should be modified to include everything purchased and promised for restoration in the purchase after the Exxon-Valdez and then approved. Thank you.
