Comments: I fully support the items in this proposal. I may not be able to access some of the facilities but I feel they will enhance the area, control the use of the land in question and improve the recreation opportunity in the future.

The proposed snowmaking is becoming a necessity. Snowfall in recent years has been less than desired. Snowmaking in the early part of the season will help spread the demand onto additional trails. Most of the water 'consumed' in snowmaking returns to the streams in the spring.

Mountain Biking and Hiking paths will help reduce the random 'off trail' excursions now taking place. More variety is needed to satisfy the 'hard corp' trail user. Proper construction of trails should reduce erosion to the mountain.

The proposal for 'platform tents' reminds me of some of the scout camps I attended when younger.

Most of the proposed facilities are 'reversible' and could be removed with little or no evidence.
