Comments: Single track Trails Recreational Use

The Forest plan provides great opportunity for recreation - For example, mountain biking advocates secured approval for 88 miles of new bicycle-only single track on the Wayne this year, and the forest's motorized trail system has grown wider and smoother to better accommodate UTVs.

Please don't forget those users who value the motorized single track trail experience - it is a unique and irreplaceable way to experience the forest.

There is a large user group that prefer to experience the Forest on a motorcycle on single track trail, and travel far and wide in search of that environment. The low-speed challenge and immersion into the forest environment is an experience like no other.

Myself and the AMA strongly support full-spectrum multiple use, but also advocate for motorcycle single track on the WNF, the demand is real.

Thank you for your time.
