Title:

Comments: I want to add my support for the management goals of the Granite Meadows Project. Most specifically I support the proposed recreation improvements to the area. As a year-round recreational user of the Granite Meadows region and the adjacent areas, I see a great deal of benefit that could be provided by building, rebuilding, or improving the trail systems, restroom facilities, and roads in that area. Legitimizing existing non-system trails that have been used for many years and establishing new connector trails to connect Bear Basin to the existing trail systems at Brundage and the Payette Rim Trail will create both an improved experience for the trail users and better forest health through effective management. Our town and county rely heavily on recreational tourism and, as a local business owner, I see great potential for these proposed improvements to benefit the the local economy by boosting and supporting our recreational tourism traffic.
